List of file extensions

File extensions can provide information on what technologies are being used on this website.
List of file extensions detected:

- css => 2 file(s)
- woff2 => 2 file(s)
- js => 12 file(s)
- json => 147 file(s)

Top 10 response times

The files listed below had the slowest response times measured during the crawling process. The average response time for this site was 412.63 ms. These files could be targetted in denial of service attacks.

1. /tabs-behavior, response time 1000 ms

GET /tabs-behavior HTTP/1.1
Pragma: no-cache
Cache-Control: no-cache
Referer: https://base.uber.com/
Acunetix-Aspect: enabled
Acunetix-Aspect-Password: 082119f75623eb7abd7bf357698ff66c

Alert details

Clickjacking: X-Frame-Options header missing

Severity	Low
Type	Configuration
Reported by module	Scripting (Clickjacking_X_Frame_Options.script)

Description

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server didn't return an X-Frame-Options header which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into other sites.

Impact

The impact depends on the affected web application.

Recommendation

Configure your web server to include an X-Frame-Options header. Consult Web references for more information about the possible values for this header.

Request headers
GET / HTTP/1.1 Host: base.uber.com Connection: Keep-alive Accept-Encoding: gzip,deflate User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64) AppleWebKit/537.21 (KHTML, like Gecko) Chrome/41.0.2228.0 Safari/537.21 Accept: */*

Insecure response with wildcard '*' in Access-Control-Allow-Origin

Severity	Low
Type	Configuration
Reported by module	Scripting (Access_Control-Allow-Origin_Dir.script)

Description

Cross-origin resource sharing (CORS) is a mechanism that allows restricted resources (e.g. fonts) on a web page to be requested from another domain outside the domain from which the resource originated. The Access-Control-Allow-Origin header indicates whether a resource can be shared based by returning the value of the Origin request header, "*", or "null" in the response.

If a website responds with Access-Control-Allow-Origin: * the requested resource allows sharing with every origin. Therefore, any website can make XHR (XMLHttpRequest) requests to your site and access the responses. It's not recommended to use the Access-Control-Allow-Origin: * header.

Impact

Any website can make XHR requests to your site and access the responses.

Recommendation

Is recommended not to use Access-Control-Allow-Origin: *. Instead the Access-Control-Allow-Origin header should contain the list of origins that can make COR requests.
